## APPLETON 150 AMP PLUGS AND RECEPTACLES

Appleton's Powertite plug/receptacle and EBR explosion-proof receptacle lines include a 150-amp version. It meets the need to supply power to equipment drawing approximately 100 amps over long runs. They are designed to increase job-site efficiency and flexibility while ensuring safety. The 150-amp solution eliminates the risk of overdriving, which can lead to additional service and maintenance work.

## JUNO RECESSED LED DOWNLIGHTS

Energy efficient, maintenance free and dimmable for residential, retail, commercial... it's the right light. The Juno LED Downlight is the new, improved approach to recessed lighting. Extremely low energy consumption, remarkably long life, minimal heat generation, and uniform illumination make it the right answer for many applications. Three color temperatures; 3000K, 3500K and 4100K, are available in five and six-inch housings in new construction and remodel styles. All housings are IC-rated for use in either insulated or non-insulated ceilings.

## CUTLER HAMMER PANELBOARD

The Pow-R-Line 3E (or PRL3E) panelboard offers multiple new features that existing panelboards don't offer. Many of the new features incorporated in the design were the result of targeted customer focus groups. These features provide better performance characteristics, added safety features, a new chassis-mounted neutral and straight-in wiring for all phase and neutral conductors.

## RD-200 DIMMING WALL SWITCH VACANCY SENSOR

Watt Stopper/Legrand's RD-200 dimming vacancy sensor combines a preset dimmer and a sensor to help maximize energy savings. Featuring a sturdy lens and low profile design, the product installs quickly and operates reliably year after year. The sensor turns lights off automatically when a space becomes vacant. When lights are on, the dimming level may be adjusted manually. The RD-200 is available in four colors with matching lenses.
